## Lifetime Profit Index（LPI）Formula －January 2010 －

$$
\mathrm{LPI}=\begin{gathered}
\text { Production } \\
\text { Component } \\
\text { x Emphasis } \\
\times \text { Factor }
\end{gathered}+\underset{\text { Durability }}{\text { Component }} \times \begin{gathered}
\text { Health \& Fertility } \\
\text { Comphasis } \\
\times \text { Factor }
\end{gathered}+\begin{gathered}
\text { x Emphasis } \\
\times \text { Factor }
\end{gathered}
$$

Where the relative emphasis placed on each of the three main components in each breed is presented in the following table along with the multiplicative factors for each component．

| Breed | Production |  | Durability |  | Health \＆Fertility |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Emphasis | Factor | Emphasis | Factor | Emphasis | Factor |
| Ayrshire | 54 | 1.0608 | 31 | 1.5151 | 15 | 1.9273 |
| Brown Swiss | 54 | 1.2852 | 31 | 1.4963 | 15 | 2.0279 |
| Canadienne | 54 | 1.3306 | 31 | 1.5470 | 15 | 1.6553 |
| Guernsey | 54 | 1.4177 | 31 | 1.7104 | 15 | 1.5316 |
| Holstein | 51 | 1.5352 | 34 | 1.4987 | 15 | 1.4935 |
| Jersey | 57 | 1.3970 | 33 | 1.4258 | 10 | 2.0757 |
| Milking Shorthorn | 54 | 1.7073 | 31 | 1.6949 | 15 | 2.3360 |

## Production Component（PROD）：

$$
P R O D=\left[W_{P Y} X\left(P Y-A v g_{P Y}\right) / S D_{P Y}\right]+\left[W_{P D} X P D / S D_{P D}\right]+\left[W_{F Y} X\left(F Y-A v g_{F Y}\right) / S D_{F Y}\right]+\left[W_{F D} X F D / S D_{F D}\right]
$$

Where PY＝Protein Yield，PD＝Protein Deviation，FY＝Fat Yield and FD＝Fat Deviation，which are standardized using the appropriate averages（Avg）and standard deviations（SD）and then multiplied by their respective relative weight（W），all of which are breed specific as outlined in the following table．

| Parameter | Trait |  |  |  | $\begin{aligned} & \vec{\vdots} \\ & \stackrel{\rightharpoonup}{\omega} \\ & \stackrel{0}{0} \\ & 00 \end{aligned}$ | $\begin{aligned} & \text { 듳 } \\ & \text { ⿹勹䶹 } \\ & \text { ㅇ } \end{aligned}$ | त |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| EBV Averages ${ }^{1}$ | Protein Yield Fat Yield | $\begin{aligned} & -1 \\ & -2 \end{aligned}$ | $\begin{aligned} & 0 \\ & 2 \end{aligned}$ | $\begin{aligned} & -4 \\ & -5 \end{aligned}$ | $\begin{aligned} & 4 \\ & 6 \end{aligned}$ | $\begin{aligned} & 9 \\ & 6 \end{aligned}$ | $\begin{aligned} & 3 \\ & 4 \end{aligned}$ | $\begin{aligned} & -2 \\ & -2 \end{aligned}$ |
| EBV Standard Deviations | Protein Yield <br> Protein Deviation <br> Fat Yield <br> Fat Deviation | $\begin{aligned} & 16 \\ & .10 \\ & 20 \\ & .18 \end{aligned}$ | $\begin{aligned} & 20 \\ & .10 \\ & 25 \\ & .17 \end{aligned}$ | $\begin{gathered} 8 \\ .17 \\ 13 \\ .23 \end{gathered}$ | $\begin{aligned} & 21 \\ & .11 \\ & 25 \\ & .31 \end{aligned}$ | $\begin{aligned} & 25 \\ & .12 \\ & 31 \\ & .30 \end{aligned}$ | $\begin{array}{r} 25 \\ .16 \\ 34 \\ .35 \\ \hline \end{array}$ | $\begin{array}{r} 15 \\ .09 \\ 22 \\ .19 \end{array}$ |
| Relative Weights Within the Production Component | Protein Yield <br> Protein Deviation <br> Fat Yield <br> Fat Deviation | $\begin{aligned} & 5.7 \\ & 0.3 \\ & 3.8 \\ & 0.2 \end{aligned}$ | $\begin{aligned} & 5.7 \\ & 0.3 \\ & 3.8 \\ & 0.2 \end{aligned}$ | $\begin{aligned} & 5.1 \\ & 0.9 \\ & 3.4 \\ & 0.6 \end{aligned}$ | $\begin{aligned} & 5.7 \\ & 0.3 \\ & 3.8 \\ & 0.2 \end{aligned}$ | $\begin{aligned} & 5.7 \\ & 0.3 \\ & 3.8 \\ & 0.2 \end{aligned}$ | $\begin{aligned} & 5.7 \\ & 1.0 \\ & 2.8 \\ & 0.5 \end{aligned}$ | $\begin{aligned} & 5.1 \\ & 0.9 \\ & 3.4 \\ & 0.6 \end{aligned}$ |

## Durability Component (DUR):

$$
\text { DUR }=\left[\mathrm{W}_{\mathrm{HL}} \times(\mathrm{HL}-100) / 5\right]+\left[\mathrm{W}_{\mathrm{MS}} \times \mathrm{MS} / 5\right]+\left[\mathrm{W}_{\mathrm{F} \& L} \times \mathrm{F} \& \mathrm{~L} / 5\right]+\left[\mathrm{W}_{\mathrm{DS}} \times \mathrm{DS} / 5\right]
$$

Where HL = Herd Life, MS = Mammary System, F\&L = Feet and Legs, DS = Dairy Strength and each trait is standardized using the appropriate averages and standard deviations and then multiplied by their respective relative weight $(\mathrm{W})$ that is breed specific as outlined in the following table.

| Parameter | Trait |  |  |  | $\begin{aligned} & \vec{む} \\ & \stackrel{\rightharpoonup}{0} \\ & \stackrel{5}{0} \\ & 0 \end{aligned}$ |  | - |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Relative Weights Within the Durability Component | Herd Life | 2.0 | 3.6 | 3.6 | 3.6 | 2.0 | 2.0 | 3.2 |
|  | Mammary System | 4.0 | 3.2 | 3.2 | 3.2 | 4.0 | 4.0 | 3.6 |
|  | Feet \& Legs | 3.0 | 2.4 | 2.4 | 2.4 | 3.0 | 3.0 | 2.4 |
|  | Dairy Strength | 1.0 | 0.8 | 0.8 | 0.8 | 1.0 | 1.0 | 0.8 |

## Health \& Fertility Component (H\&F):

$$
\begin{gathered}
H \& F=\left[W_{S C S} \times-1 \times(S C S-3.00) / 0.23\right]+\left[W_{\mathrm{UD}} \times \mathrm{UD} / 5\right]+\left[\mathrm{W}_{\mathrm{MSP}} \times(\mathrm{MSP}-100) / 5\right]+ \\
{\left[\mathrm{W}_{\mathrm{DF}} \times(\mathrm{DF}-100) / 5\right]+\left[\mathrm{W}_{\mathrm{LP}} \times(\mathrm{LP}-100) / 5\right]}
\end{gathered}
$$

Where SCS = Somatic Cell Score, UD = Udder Depth, MSP = Milking Speed, DF = Daughter Fertility and $\mathrm{LP}=$ Lactation Persistency. The relative weights for each trait (i.e.: $\mathrm{W}_{\mathrm{ScS}}, \mathrm{W}_{\mathrm{UD}}, \mathrm{W}_{\mathrm{MSP}}, \mathrm{W}_{\mathrm{DF}}$ and $\mathrm{W}_{\mathrm{LP}}$ respectively), which are specific to each breed, are provided in the following table.

| Parameter | Trait |  |  |  | $\begin{aligned} & \overrightarrow{0} \\ & \stackrel{y}{0} \\ & \stackrel{y}{0} \\ & \vdots \end{aligned}$ | ¢ \# ¢ 문 | त $\stackrel{\omega}{\omega}$ $\stackrel{\sim}{ \pm}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Relative Weights Within the Health \& Fertility Component | Somatic Cell Score | 2.0 | 2.0 | 4.8 | 2.0 | 2.0 | 4.2 | 4.8 |
|  | Udder Depth | 1.0 | 1.0 | 2.4 | 1.0 | 1.0 | 2.1 | 2.4 |
|  | Milking Speed | 0.3 | 3.0 | 0.8 | 0.3 | 0.3 | 0.7 | 0.8 |
|  | Daughter Fertility | 4.0 | 4.0 | 2.0 | 6.7 | 6.7 | 3.0 | 2.0 |
|  | Lactation Persistency | 2.7 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |

## Application

The Lifetime Profit Index formula for each breed is applied to bulls and cows in Canada that have official genetic evaluations for production and type traits. In any case when an official genetic evaluation for a specific trait is not available, namely for Milking Speed or Daughter Fertility, the LPI is based on any preliminary genetic evaluation that is available or, otherwise, a value equal to breed average is used.

For foreign sires in the Holstein, Ayrshire, Jersey, Brown Swiss and Guernsey breeds that have MACE evaluations available for production and type traits, Somatic Cell Score, Direct Herd Life and female fertility traits, the LPI formula for the respective breed is used to compute MACE LPI (MLPI) values. In these cases, the MACE evaluation for Direct Herd Life is combined with a predicted Herd Life value based on MACE proofs for various traits and fixed values for Milking Speed and Lactation Persistency are used for all foreign bulls of the same breed.
